Disclosure Report as of September 30, 2022

1. OVERVIEW ON DISCLOSURES

The Report is prepared in accordance with National Bank of Romania Regulation no. 5/2013 regarding prudential requirements for credit institutions, Regulation no. 575/2013 of European Parliament and Council dated 26.06.2013 regarding prudential requirements for credit institutions and investment companies and amending Regulation (UE) no.648/2012 and with subsequent amendments, and connected regulatory requirements as National Bank of Romania Regulation no. 11/2020, National Bank of Romania Regulation no. 2/2022, Regulation no. 876/2019 of European Parliament and Council.

The information disclosed is compliant with the COMMISSION IMPLEMENTING REGULATION (EU) 2021/637 of 15 March 2021, laying down implementing technical standards with regard to public disclosures by institutions of the information referred to in Titles II and III of Part Eight of Regulation (EU) No 575/2013 of the European Parliament and of the Council and repealing Commission Implementing Regulation (EU) No 1423/2013, Commission Delegated Regulation (EU) 2015/1555, Commission Implementing Regulation (EU) 2016/200 and Commission Delegated Regulation (EU) 2017/2295 and with the dedicated Guidelines issued by European Banking Authority and Basel Committee:

- EBA /GL/2014/14 Guideline on materiality, proprietary and confidentiality and on disclosure frequency under Articles 432(1), 432(2), 433 and 433(a) of Regulation (EU) No 575/2013;
- EBA/ITS/2020/04 Technical Standards on Pillar III that implements changes introduced in the CRR2;
- EBA Guidelines EBA/GL/2020/07 on reporting and disclosure of exposures subject to measures applied in response to the COVID-19 crisis;

The document is available in electronic format at www.unicredit.ro, area Financial Reports, Basel II-Pillar III Disclosure, in the following location:

<https://www.unicredit.ro/en/institutional/the-bank/financial-reports.html#baseliipillariiidisclosure>

The quantitative data are presented on consolidated basis, except those flagged at individual level, in RON equivalent, except those flagged in other currencies.

As the UniCredit Bank Romania has been identified as “Other Systemically Important Credit Institution (O-SII)” from Romania, the Bank provides its users with quarterly frequency the relevant information (Regulation no. 876/2019 of European Parliament and Council, Article 447).

The Pillar III Report is approved by the Supervisory Board of UniCredit Bank Romania.

When assessing the disclosure requirements in accordance with Regulation (UE) No 575/2013 and with REGULATION (EU) 2021/637 of 15 March 2021 regarding the disclosure requirements as the 8th part of Regulation (UE) No. 575/2013, the Bank considers the following requirements as not applicable:

Area	Regulation (EU) no 575/2013 article reference	Disclosure template	Reason for not disclosure
Use of Internal Market Risk Models	455	EU MR2-A – Market risk under the IMA (Internal Modal Approach)	UniCredit Bank does not apply an internal model approach for the calculation of market risk capital requirements
	445 & 455	EU MR2-B – RWA flow statements of market risk exposures under the IMA	UniCredit Bank does not apply an internal model approach for the calculation of market risk capital requirements
	445 & 455	EU MRB – Qualitative disclosure requirements for institutions using the IMA	UniCredit Bank does not apply an internal model approach for the calculation of market risk capital requirements
	445 & 455	EU MR3 – IMA values for trading portfolios	UniCredit Bank does not apply an internal model approach for the calculation of market risk capital requirements

Disclosure Report as of September 30, 2022

Area	Regulation (EU) no 575/2013 article reference	Disclosure template	Reason for not disclosure
	445 & 455	EU MR4 – Comparison of VaR estimates with gains/losses	UniCredit Bank does not apply an internal model approach for the calculation of market risk capital requirements
Capital requirements	438	EU INS1 – Non-deducted participations in insurance undertakings	As at September 30, 2022, UniCredit Bank does not have participations in insurance undertakings
Exposure to counterparty credit risk	439	EU CCR8 – Exposures to CCPs	As at September 30, 2022, UniCredit Bank does not have exposures to CCPs
		EU CCR6 – Credit derivatives exposures	As at September 30, 2022, UniCredit Bank does not have credit derivatives exposures
Use of credit risk mitigation techniques	453	EU CR7 – IRB approach – Effect on the RWAs of credit derivatives used as CRM techniques	As at September 30, 2022, UniCredit Bank does not use credit derivatives used as CRM techniques
Indicators of global systemic importance	441		UniCredit Bank has not been identified as global systemically important institutions (G-SIIs)
Securitizations		SEC1 – Securitization exposures in the banking book	UniCredit Bank does not perform securitization transactions
		SEC2 – Securitization exposures in the trading book	
		SEC3 – Securitization exposures in the banking book and associated regulatory capital requirements – bank acting as originator or as sponsor	
		SEC4 – Securitization exposures in the banking book and associated capital requirements – bank acting as investor	

2. SCOPE OF APPLICATION

2.1 Relevant scope of consolidation

The institution subject to disclosure is **UniCredit Bank SA**. (“the Bank” or “UCB”); the report includes Bank’s information and also information regarding the entities integrated in the consolidated prudential perimeter of UniCredit Bank (further described as “the Group”).

Starting August 2015, UniCredit Bank S.A. (the “Bank”) is the new brand name of formerly UniCredit Tiriac Bank SA that was established as a Romanian commercial bank on 1 June 2007 upon the merger by acquisition of the former UniCredit Romania S.A. (the absorbed bank) by Banca Comerciala HVB Tiriac S.A. (the absorbing bank) and is licensed by the National Bank of Romania (“NBR”) to conduct banking activities.

The Bank’s current registered office is 1F, Expozitiei Boulevard, District 1, Bucharest, Romania.

UniCredit Bank S.A. is controlled by UniCredit SpA (Italy), with registered office in Milano (Mi), Italia, Piazza Gae Aulenti 3 Cap 20154 Tower A.

The Bank provides retail and commercial banking services in Romanian Lei (“RON”) and foreign currency for individuals and legal entities. These include: accounts opening, domestic and international payments, foreign exchange transactions, working capital finance, medium and long term facilities, retail loans, bank guarantees, letter of credits and documentary collections, derivative financial instruments.

UniCredit Bank Group is exercising direct and indirect control over the following subsidiaries:

- UniCredit Consumer Financing IFN S.A., having its current registered office at 1F, Expozitiei Boulevard, 6th floor, District 1, Bucharest, Romania, provides consumer finance loans to individual clients. The Bank has a shareholding of 50.1% in UCFIN since January 2013.
- UniCredit Leasing Corporation IFN (“UCLC”), having its headquarters in 1F, Expozitiei Boulevard, 1st, 7th and 8th floor, District 1, Bucharest, Romania, provides financial leasing services to corporate clients and individuals. UCLC, the former associate, has become the Bank’s subsidiary since April 2014 when the Bank gained indirect control of 99.95% (direct control: 99.90%). The Bank’s indirect ownership rate as of 31 December 2019 is 99.98% (direct control: 99.96%) as a result of the merger by absorption of UniCredit Leasing Romania SA (“UCLRO”) by UCLC finalized in June 2015, the date at which UCLRO was absorbed by UCLC.
- UniCredit Insurance Broker S.R.L. (“UCIB”), having its current registered office in 23-25 Ghetarilor Street, 2nd floor, 1st district, Bucharest, Romania, intermediates insurance policies related to leasing activities to legal entities and individuals, and became a subsidiary of the Bank beginning with 31 December 2020. The Bank has an indirect controlling interest of 99.98% through UCLC which owns 100% UCIB.
- Debo Leasing S.R.L. (“DEBO”) was a real estate finance lease entity and became a subsidiary of the Bank beginning with April 2014. The Bank had an indirect controlling interest of 99.97% through UCLC. Considering that Debo’s portfolio contracts expired in May 2021, the company was liquidated during December 2021.

2.2 Entities deducted from Own Funds or added to RWA

According to Regulation no. 575/2013 of European Parliament and Council dated 26.06.2013 regarding prudential requirements for credit institutions and investment companies, the holdings in Common Equity Tier 1 (CET1) that are classified as significant investments should be deducted from own funds if the CET1-threshold for deduction is exceeded.

As at 30 September 2022 UniCredit Bank does not hold at individual level significant investments in financial entities to be deducted from own funds according to the Article 48 from CRR.

As at 30 September 2022, the significant investments in financial entities are shown at the individual level with a risk weight of 370% as they are not deducted from own funds, but are included in the consolidated perimeter.

2.3 Substantial or legal impediments that hinder the rapid transfer of capital resources within the Group

At UniCredit Group level, an integrated analysis is done to identify the significant risks. The processes for management, monitoring and reporting of risks are formalized in the Group regulations, aligned and integrated at the local group at UniCredit Bank SA level. In accordance with the rules regarding the analysis process, calibration, approval, adoption, implementation, monitoring and reporting of the Group regulations, UniCredit Bank SA has the responsibility of sending the applicable regulation to its subsidiaries, in order to be analyzed, approved/adopted and implemented. Subsequently, UniCredit Bank SA assesses and decides the applicability at the subsidiaries level taking into account the nature, dimension and complexity of their activities.

In order to ensure the control over implementation of the Group requirements at the level of direct controlled entities, there is a frequent reporting process regarding the status of local implementation under the Internal Control Committee of UniCredit Bank SA.

The main potential impediments regarding the rapid transfer of capital resources are addressed below:

2.3.1 The impact of legal status of subsidiaries regarding the prompt transfer of funds and/or debt reimbursement

UniCredit Consumer Finance IFN SA

UniCredit Bank SA (UCB) controls UniCredit Consumer Financing (UCFin) through majority of voting rights held (50.1%), which implies the approval of development plan and strategy of UCFIN in accordance with Bank and UniCredit Group's strategy.

The control exercised over UCFIN is strengthened by the fact that UCB appoints 4 out of 5 members of UCFIN Supervisory Board in accordance with UCFIN Articles of Association („AoA” or Constitutive Act). In Accordance with AoA, the UCFIN Supervisory Board has the authority to check the Board Member's activity in respect of the implementation of the Bank's strategy, aligned with those of UniCredit Group.

As result, there is no impediment which could adversely impact the prompt transfer of funds from UCFIN to UCB and/or the UCFIN capacity for fast reimbursement of debts to UCB.

UniCredit Leasing Corporation IFN SA

UniCredit Bank SA (UCB) controls UniCredit Leasing Corporation IFN S.A. (UCLC) through majority of voting rights held (99.977%), which implies the approval of development plan and strategy of UCLC in accordance with Bank and UniCredit Group's strategy.

The control exercised over UCLC is strengthened by the fact that UCB appoints all 5 members of UCLC Supervisory Board in accordance with UCLC Articles of Association („AoA” or Constitutive Act). In Accordance with AoA, the UCLC Supervisory Board has the authority to check the Board Member's activity in respect of the implementation of the Bank's strategy, aligned with those of UniCredit Group.

As a result, there is no impediment which could adversely impact the prompt transfer of funds from UCLC to UCB and/or the UCLC capacity for fast reimbursement of debts to UCB.

The Articles of Associations of UCFIN and UCLC do no include limitations, restrictions regarding the transfer of own funds and/or debt reimbursement.

2.3.2 Assessment of the other interests, different from those (controlling interests) of UCB and of their impact. UCB capacity to ask for the funds transfers or debt reimbursements

No other interests were identified except the UCB controlling interests as the control is defined in the Articles of Associations of the 2 subsidiaries.

Meanwhile, we mention that the financing agreements concluded between UCB and their subsidiaries contain contractual clauses regarding the situations where repayments in advance can appear and where collateral guarantees are in place, where all actual and future cash amounts are pledged in the bank's favour (credit balances in the bank accounts open at UCB).

2.3.3 Potential unfavorable fiscal impact for UCB or its subsidiaries in case of funds transfer or debt reimbursement

At UniCredit Bank SA level there is no adverse fiscal impact as a result of the potential prompt transfer of funds or debt repayment in advance in accordance with the Fiscal Code provisions in force starting with 1st of January 2017. At subsidiaries level, in hypothetical case of share capital distribution, there is no effect that could generate a fiscal impact.

2.3.4 Eventual prejudices that could result from the business strategies of subsidiaries regarding the prompt transfer of funds and/or debt reimbursement

The Budget for 2022 and the financial plan for the next 3 years of UCB and its subsidiaries outline the intention of ongoing business activity and to support the implementation of the subsidiaries' strategies. In normal conditions of ongoing business activity, there has not been forecasted any prompt transfer of funds and/or debt repayments in advance in the financial plans.

2.3.5 Analysis of the impact of contractual relationships between the subsidiaries and UCB/other third parties regarding the prompt transfer of funds and/or debts repayment

The contractual relationships between UCB and its subsidiaries are approved and monitored in accordance with the provisions of Articles of Association of subsidiaries and internal procedures which regulates the competencies levels for approval set up by managements and their shareholders.

Taking into account the shareholders structure, there is no negative risk that could impact the contractual business relationships of subsidiaries.

2.3.6 The historical and forecast flows of funds between UCB and its subsidiaries with potential impact on the capacity of prompt transfer of funds and/or debt reimbursement

The loan agreements concluded by UniCredit Bank with its subsidiaries include the calculation of penalty interest in case the loans' payments obligations are not met. The penalty interest is applied at the maturity date, until the full payment date and it is applied to outstanding amount. There have been no cases in the past of penalty interest being applied for the credit lines granted to subsidiaries of UCB.

Meanwhile, we have to mention that, in accordance with the provisions of article 26 of NBR Regulation no.5/2013, UCB, as parent credit institution, takes into account and balance the interests of its subsidiaries and analyzes them continuously in the way those interests contributes to the objectives and interests of UCB Group and respectively of UniCredit Group, taken together as one objective/interest, on a long term basis.

2.3.7 Intragroup Liquidity Transfers

Intra-group liquidity transfers are subject to restrictions due to legal and regulatory constraints. With reference to regulatory requirements, it should be noted that UniCredit Bank is subject to rules provided by the Regulation (EU) No 575/2013 on "prudential requirements for credit institutions and investment firms".

3. OWN FUNDS AND KEY METRICS

3.1 Regulatory capital - summary and changes over time

Starting with January 2014, the Romanian Banking System is applying the Basel III norms, in accordance with Regulation no. 575/2013 of European Parliament and Council dated 26.06.2013 regarding prudential requirements for credit institutions and investment companies, amended by Regulation (UE) no.648 / 2012 and by Regulation no. 5/2013 regarding prudential requirements for credit institutions issued by National Bank of Romania and with Regulation (EU) 2021/637 of 15 March 2021 laying down implementing technical standards with regard to the disclosure of own funds requirements for institutions according to Regulation (EU) No 575/2013 of the European Parliament and of the Council.

The prudential requirements define the eligibility criteria for capital instruments which shall be included in Own Funds – Common Equity Tier 1 Capital, Additional Tier 1 Capital or Own Funds – Tier 2 Capital, as detailed below:

Capital instruments qualify as equity instruments Level 1 basic eligibility if the conditions listed below are fulfilled:

- Instruments are issued directly by the institution with the prior approval of shareholders' institution or, where permitted under applicable national legislation governing body of the institution;
- Instruments are paid, and their purchase is not funded directly or indirectly by the institution; are classified as equity within the meaning of applicable accounting framework;
- Instruments are presented clearly and distinctly in the balance sheet in the financial statements of the institution;
- Instruments are perpetual;
- The instruments meet the following conditions in terms of distributions:
 - No preferential treatment in terms of distribution order to perform distributions, including in relation to other instruments Tier 1 instruments and the conditions governing the instruments do not provide preferential rights to making distributions;
 - Distributions to holders of the instruments may be made only items that can be distributed;
 - The conditions governing the instruments do not include a cap or other restriction on the maximum level of distributions;
 - The level of distributions is not determined based on the purchase price of the instruments at issue.
 - The conditions governing the instruments do not include any obligation for the institution to make distributions to their owners, and the institution is not otherwise subject to such obligations;
 - Failure distributions is not an event of default for the institution;
 - Annual distributions do not impose restrictions on the institution.

Capital instruments qualify as equity instruments Level 2 if the conditions for eligibility listed below are fulfilled:

- Subordinated loans are obtained and fully paid;
- Subordinated loans are not issued by a subsidiary or an associate;

Disclosure Report as of September 30, 2022

- Providing subordinated loans is not funded directly or indirectly by the institution; the principal debt subordinated loans under the provisions governing subordinated loans, is entirely subordinated to the claims of all unsubordinated creditors;
- Subordinated loans have an original maturity of at least five years;
- Provisions governing, subordinated loans do not include any incentive for their principal amount to be refunded or, if applicable, returned by the institution before maturity;
- Subordinated loans can be recognized in the category of Tier 2 items if in the opinion of the National Bank of Romania meet the eligibility conditions listed above.

The main characteristics of the Level 1 Capital Instruments are detailed below:

Capital Instruments Level 1		
1	Issuer	UniCredit Bank Romania
2	Unique identifier (e.g.: CUSIP, ISIN or Bloomberg identifier for private placement)	n/a
3	Governing law(s) of the instrument	Law-no.31/1990
Regulatory treatment		
4	Transitional CRR rules	CET1
5	Post-transitional CRR rules	CET1
6	Eligible at solo/(sub-)consolidated/ solo&(sub-)consolidated	solo and consolidated
7	Instrument type (types to be specified by each jurisdiction)	ordinary shares
8	Amount recognized in regulatory capital (in RON thousands)	1,177,748,253
	Currency of issue	RON
9	Nominal amount of instrument - in currency of issue	9.3
10	Accounting classification	shareholder's equity
12	Perpetual or dated	perpetual
13	Original maturity date	no maturity
14	Issuer call subject to prior supervisory approval	yes
15	Optional call date, contingent call dates and redemption amount (s. 9b)	yes
16	Subsequent call dates, if applicable	-
Coupons / dividends		
17	Fixed or floating dividend/coupon	Floating
18	Coupon rate and any related index	n/a
19	Existence of a dividend stopper	No
20a	Fully discretionary, partially discretionary or mandatory (in terms of timing)	Discretionary
20b	Fully discretionary, partially discretionary or mandatory (in terms of amount)	Discretionary
21	Existence of step up or other incentive to redeem	No
22	Noncumulative or cumulative	non-cumulative
23	Convertible or non-convertible	No
24	If convertible, conversion trigger(s)	-
25	If convertible, fully or partially	-
26	If convertible, conversion rate	-
27	If convertible, mandatory or optional conversion	-
28	If convertible, specify instrument type convertible into	-
29	If convertible, specify issuer of instrument it converts into	-
30	Write-down features	No
31	If write-down, write-down trigger(s)	-
32	If write-down, full or partial	-
33	If write-down, permanent or temporary	-
34	If temporary write-down, description of write-up mechanism	-
35	Position in subordination hierarchy in liquidation (specify instrument type immediately senior to instrument)	subordinated
36	Non-compliant transitioned features	No
37	If yes, specify non-compliant features	-

Disclosure Report as of September 30, 2022

Tier 2 - Capital Instruments features			
1	Issuer	UniCredit SPA	UniCredit SPA
2	Unique identifier (e.g. CUSIP, ISIN or Bloomberg identifier for private placement)	n/a	n/a
3	Governing law(s) of the instrument	Romanian Law-OUG 99/2006	Romanian Law-OUG 99/2006
Regulatory treatment			
4	Transitional CRR rules	Tier 2	Tier 2
5	Post-transitional CRR rules	Tier 2	Tier 2
6	Eligible at solo/(sub-)consolidated/ solo&(sub-)consolidated	solo and consolidated	solo and consolidated
7	Instrument type (types to be specified by each jurisdiction)	subordinated loan	subordinated loan
8	Amount recognized in regulatory capital (in RON)	48,500,000	120,000,000
	Currency of issue	EUR	EUR
9	Nominal amount of instrument (aggregate) - in currency of issue	48,500,000	120,000,000
9a	Issue price	48,500,000	120,000,000
9b	Redemption price - in currency of issue	48,500,000	120,000,000
10	Accounting classification	liabilities at amortized cost	liabilities at amortized cost
11	Original date of issuance	27/07/2017	29/12/2017
12	Perpetual or dated	dated	dated
13	Original maturity date	27/07/2027	29/12/2027
14	Issuer call subject to prior supervisory approval	yes	yes

4. CAPITAL REQUIREMENTS

4.1 General comment

Capital Adequacy Assessment

During 2022, it was continued the sustained process for enhancing the internal methodological framework with specific regulations, mainly as regards to ICAAP general framework, stress tests, setting and monitoring of risk appetite, capital management rules, rules regarding the risks identified by the Bank as significant.

The Internal Capital Adequacy Assessment Process was performed in accordance with National Bank of Romania Regulation no 5/2013, with subsequent amendments and changes, representing an independent assessment of the current and future internal capital, related to the risks the bank is facing and in line with the Bank's strategy. UCB assesses the balance between the assumed risk and the available capital consistently with the strategy and assumed objectives, respectively the internal capital and the available financial resources.

The internal capital is represented by the sum of the economic capitals calculated for each risk: credit risk, market risk, operational risk, business risk, real estate investments risk based on internal models (ex. CVaR, VaR etc.).

The ultimate mission of the capital adequacy is to ensure that it forms an integral part of day-to-day management and decision-making processes such as: embedding risk management measures and the capital needed in strategic planning, introduction of risk analysis in strategic planning and budgetary processes.

Thus, the Bank develops and manages its risk management processes, respectively implements processes and tools to assess the level of internal capital adequate to support each type of risk, including those risks not captured by the total capital requirement (i.e. Pillar I risks), within the scope of an assessment of the Bank's legal current and future exposure, taking account its strategies and developments in its business environment.

Necessary regulated own funds requirements at consolidated level

For calculating the regulatory capital requirements for credit risk, the Bank applies the Foundation Internal Rating Based Approach, according to Regulation no. 575/2013 of European Parliament and Council dated 26.06.2013 regarding prudential requirements for credit institutions and investment companies and amending Regulation (UE) no. 648/2012 of the Commission for establishing technical standards for reporting for supervisory purposes and by Regulation no. 5/2013 regarding prudential requirements for credit institutions issued by National Bank of Romania (due to the joint approval received from Bank of Italy, FMA and National Bank of Romania) for the following segments of clients: corporate (except for real estate clients and specialized financing), multinational companies, banks, sovereigns and central banks and securities industries.

According to Joint Decision ECB / NBR received during Q2 2020, the Bank received the permission to implement material changes to the Romanian probability of default model for the Mid-Corporate portfolio of UniCredit Bank SA and to apply the permanent partial use of the standardized approach to the non-banking financial institutions portfolio, real estate companies and foreign clients' portfolios. The Decision was adopted pursuant to Articles 20(1)(a), 143(3), 149(1)(a), 150(1)(b) and (c) of Regulation (EU) No 575/2013 of the European Parliament and of the Council, Article 13 of Commission Implementing Regulation (EU) 2016/1004 in conjunction with Article 4(1)(e), Article 9(1) and Article 10(1) of Regulation (EU) No 1024/2013.

According to NBR approval received on 22 December 2020 regarding the provisions of the Article 150 of Regulation No 575/2013 of the European Parliament, the Bank started to temporary report the exposures in foreign currency of EU member states of Central Administrations and Central Banks according to standardized approach using a 0% RWA percentage.

Further, for the rest of the loan portfolio, the Bank continued to apply the Standardized approach.

Disclosure Report as of September 30, 2022

For calculating the regulatory capital requirements for market risk, the Bank uses the Standardized Approach, while, for operational risk, it is used advanced approach in accordance the above mentioned regulations. All tasks related to the calculation and monitoring of capital requirements are performed by specialized units of Finance Division and Risk Division of the Bank.

For complying with capital adequacy requirements established by Emergency Ordinance 99/2006, the Bank is actively involved in an evaluation process of capital requirements, for sustaining current and future activity, which implies the following processes: budgeting, monitoring and analysis, stress testing and forecasting.

4.2 Capital Planning

Tier 1 capital is the core measure of the Group's financial health and is assessed from the view of its capacity to absorb losses without ceasing business operations. Under Basel III, the minimum Tier 1 capital ratio is 6%, which is calculated by dividing the Bank's tier 1 capital by its total risk-weighted assets.

As at September 2022, the Bank did not hold additional Tier 1 instruments, therefore Core Tier 1 ratio was calculated at the level of Tier 1 ratio, with a consolidated level of 15.93%, significantly higher than the minimum regulatory requirement.

As per Regulation 575/2013, the Minimum Total Capital Requirement is set to 8% of Risk Weighted Assets.

Based on common decision European Central Bank and National Bank of Romania (SREP process), UniCredit Bank must at all times satisfy the total capital ratio (solvency ratio) of 13.10% at individual level and 11.82% at consolidated level.

The total minimum capital requirements (including Pillar I and Pillar II buffers) is 15.60% at individual level and 16.82% at sub-consolidated level.

4.3 Capital surcharges & buffers

Regulation no. 5/2013 issued by National Bank of Romania includes specific provisions for capital buffers that may be applicable on top of minimum capital requirements. The following buffers were imposed by the National Bank of Romania through Order no. 12/2015, Order no. 8/2018 and Order no. 7/2021 and Order no. 33/2022:

Capital requirements - Pillar I	Group	Bank
Capital conservation buffer	2.50%	2.50%
Countercyclical capital buffer	0.0005%	0.0003%
O-SII buffer	1.5%	-
Systemic risk buffer	1%	-
Combined buffer requirement	5.00%	2.50%

Additionally, College of Supervisors of European Central Bank (ECB), in line with the local Supervisory Review and Evaluation Process (SREP) assessment carried out by the National Bank of Romania, decided that UniCredit Bank S.A. shall maintain a total solvency ratio above 13.10% at individual level and 11.82% at sub-consolidated level.

Solvency ratio - minimum requirements including Pillar I & II buffers	30.09.2022		
	NBR Supervisory Report – SREP	Capital buffers	TOTAL
<i>- individual level</i>			
CET 1 ratio	7.37%	2.50%	9.87%
Tier 1 ratio	9.83%		12.33%
Total capital ratio	13.10%		15.60%
<i>-sub-consolidated level</i>			
CET 1 ratio	6.65%	5.00%	11.65%
Tier 1 ratio	8.87%		13.87%
Total capital ratio	11.82%		16.82%

Other Systemically Important Institutions buffer

As per National Bank of Romania Order no. 7/2021, UniCredit Bank was identified as O-SII (Other Systemically Important Institutions) by the NBR (National Bank of Romania) and consequently, an O-SII buffer of 1.5% of the total risk weighted exposure, calculated as per art. 92(3) of EU Regulation no. 575/2013 on prudential

requirements for credit institutions, had to be maintained by the bank at sub-consolidated level, starting with 01.01.2022.

Capital conservation buffer

As per National Bank of Romania Regulation no. 5/2013 on prudential requirements for credit institutions, following the fully loaded approach, UniCredit Bank had to maintain during the first semester of 2022 a capital conservation buffer of 2.5% of the total risk weighted exposure, calculated in accordance with Article 92(3) of Regulation (EU) No 575/2013, at both individual and sub-consolidated level.

Systemic risk buffer

As per National Bank of Romania Order no. 8/2018 regarding systemic risk capital buffer and the notification of additional constant capital requirements in systemic risk amortization applicable from 1 January 2021, UniCredit Bank maintained, at sub-consolidated level, a systemic risk buffer of 1% of the total risk weighted exposure, calculated as per art. 92(3) of Regulation no. 575/2013 on prudential requirements for credit and investment institutions, and amending Regulation (EU) no. 648/2012.

Countercyclical capital buffer

As per National Bank of Romania Order no.12/2015, during the first semester of 2022, UniCredit Bank applied a countercyclical capital buffer between 0% and 0.0012% of the total risk weighted exposure on Romanian entities, calculated as per art. 92(3) of EU Regulation no. 575/2013 on prudential requirements for credit institutions.

As of 30.09.2022, UniCredit Bank maintained an overall countercyclical buffer rate, expressed as a percentage of the total risk exposure amount under Article 92 paragraph (3) of Regulation (EU) No 575/2013, of 0.0003% at individual level and of 0.0005% sub-consolidated level, driven by the exposures on non – Romanian entities.

4.4 RWA calculation method and models

The Bank calculates RWA according to the provisions of EU Regulation no. 575/2013 of the European Parliament and of the Council, using the following approaches:

Standardized Approach:

Risk-weighted exposure amount is calculated by using Fixed Regulatory Risk Weights (RW) and depends on the obligor type (Corporate/ Retail) and external rating (if available).

Internal Rating Base (IRB) Approach:

Risk-weighted exposure is calculated by using Calculated Risk Weights (RW) based on internally built credit risk parameters: Probability of default (PD), Loss given default (LGD), Exposure at default (EAD), M (Maturity).

In **Internal Rating Base** approach, Capital Reserve is adequate to the specific risk profile of the portfolio.

5. CREDIT RISK

5.1 Strategies, policies and processes for credit risk management

Credit risk strategy is established by all the Bank's activities that present a significant exposure to credit risk. The Bank's credit risk strategy is reviewed periodically, but at least once a year and whenever significant changes occur in risk assessment factors, and is approved by the Bank's management structure. The credit risk strategy reflects the tolerance to risk and the profitability level which the Bank intends to achieve in the conditions of the exposure to the assumed risks.

The Bank assesses the credit risk in all activities affected by this kind of risk, no matter if the results of the respective activities are reflected in the balance sheet or off balance sheet.

The Bank has established risk management processes and has tools in order to identify, measure, monitor and control the credit risk.

The Bank's credit risk management policy promotes a set of coherent principles and practices, oriented towards the following main directions:

- Establishment of a framework and adequate parameters of credit risk;
- Promotion and operation of a healthy and solid credit granting process;
- Promotion and maintenance of an adequate process for credit administration, measurement and monitoring;
- Permanent control over the quality of the loan portfolio.

The credit risk management is performed taking into consideration the loans both at individual level and at whole portfolio level and includes the consideration of the qualitative and quantitative aspects related to risks.

Credit risk management is realized by limiting credit risk exposures setting limits established in accordance with general strategy of the Bank (limits established by sectors of activity, zones geographical areas, counterparty categories, type of products, residence, country and currency, etc.). These limits are monitored and periodically reported to relevant committees.

The Bank is exposed in particular to credit risk in credit granting activity, this being the most common type of risk the Bank is confronted with.

The most important activity generating risk is financing, but any other banking activity can potentially generate credit risk (off balance commitments and debts, deposits constitution and other transaction on inter-banking market, hedging on stock/interbank market, etc.)

The Bank has a credit risk management process that takes into account its risk appetite, risk profile and market and macroeconomic conditions. This process includes policies and processes to identify, measure, evaluate, monitor, report, control and mitigate credit risk - including counterparty credit risk and potential future exposure, policies and processes aiming to capture the material risks inherent in individual products or transactions.

Credit risk includes risk derived from credit granting activity and from other transactions initiated for Bank clients, such as: issuance of LGs, opening / confirmation of LC's, availing, discounting of trade instruments presented by the clients, investments in stocks and other financial assets, other facilities granted to clients.

The scope and type of reporting and measuring systems for credit risk

In order to evaluate the basis of prudential exposure to credit risk, in the Bank implemented rating systems (through consideration of quantitative factors, qualitative factors and payment behavior related factors), for all categories of clients in order to realize the classification of exposures based on the assessment borrowers' credit risk throughout the entire loan life cycle, by reference to a general scale assessment of default risk.

In UniCredit Bank internal ratings and default probability plays an essential role in the entire process of credit risk management. Rating assessment is an important part of the credit approval process. Credit risk tolerance is considering limits for granting credit exposures on rating classes. During the credit life cycle, the rating information is an important part of monitoring as well as of restructuring and of the progress of non-performing loans.

In addition, the risk reporting and portfolio management focuses on rating (in addition to information on debt service).

6.

6. EXPOSURE TO COUNTERPARTY RISK

Counterparty credit risk is measured and monitored by an independent risk management unit using an internal model based on historical simulation.

Counterparty credit risk is classified into two categories:

- Pre-settlement risk - counterparty risk in connection with treasury transactions in which the counterparty defaults after entering into the transaction and remains in default until the settlement date and the transaction must be replaced at less favorable market conditions;
- Settlement risk - counterparty risk under treasury transactions in which the Bank performs a transaction (payment) on the settlement day, while the counterparty has not met its obligations yet.

Counterparty risk monitoring is based on a system of limits for individual counterparties and product groups (spot, derivatives, money market, securities and repo).

The Bank does not hold credit derivatives hedges.

The counterparty credit risk concerns information on exposures subject to counterparty credit risk in application of Chapters 4 and 6 of Title II of Part Three CRR, with amendments.

Regarding SA-CCR methodology (in place since June'21, replacing CEM approach), the Basel Committee's main objectives are:

- application to a wide variety of derivatives transactions (margined and un-margined, as well as bilateral and cleared);
- simple and easy implementation;
- fix known deficiencies of the CEM (Current Exposure Method) and the SM (Standardized Method);
- minimize discretion used by national authorities and banks;
- improve the risk sensitivity of the capital framework without creating undue complexity.

7. MARKET RISK

The **market risk management strategy** is prepared and implemented by applying the following **basic principles**:

- Market risk management is done through specific risk indicators and models: Value at risk (VaR) limits, Basis Point Value and Credit Point Value limits, foreign exchange position limits, as well as monitoring risk appetite framework defined according to internal policies and procedures;
- Exposure to market risk is generated only by Markets (Treasury) and Finance (ALM) departments;
- Trading positions are held at current market value (mark-to-market). If specific revaluation models are used, they are validated independently;
- All relevant risk factors are identified and considered during the process of setting limits. The identification of risk factors is the responsibility of Financial Risk and business lines;
- Specific events are considered in the stress scenarios, not as manual adjustments of volatilities of correlations among risk factors;
- Total VaR refers to the whole activity of the bank, not only to trading book positions, nevertheless Banking Book VaR and Trading Book VaR are calculated and monitored separately as well as per risk factors;
- Exposure to market risk (usage of limits, excesses) are reported in time and with regularity to the respective business lines, to the Management and the Group. Risk reports are generated for the total Bank and separately for each risk generating unit. Exposure to market risk limits are monitored for the UniCredit Group in Romania, as well as for UniCredit Consumer Financing (UCFin) and UniCredit Leasing (UCL), according to internal regulations.

Interest Rate Risk - Exposures to interest rate risk on positions in the banking book

UniCredit Bank measures and monitors this risk according to the UniCredit Group methodology within the framework of a Banking Book interest rate risk policy that establishes consistent methodologies and models and limits or thresholds to focus on, with regard to the sensitivity of net interest income and the Bank's economic value.

IRRBB management is performed within Markets and Finance departments.

Financial Risk supports the process by **development of behavioral models for interest rate risk and applying hedge accounting techniques**.

Interest rate risk measurement includes the following indicators:

A) RAF KPIs – measured on a monthly basis

A.1) Net Interest Income sensitivity

The outcome of the 2 scenarios as described above is measured as a percentage versus the Net Interest Income budget. The negative outcome is considered as the RAF KPI.

A.2) Economic Value sensitivity

The worst outcome of the Supervisory Outlier Tests - which in the case of UCB Romania is the “parallel up” scenario - is measured against Tier 1 Own funds.

The RAF KPIs are monitored monthly by Financial Risk and reported to the relevant committees: ALCO, Risk Management Operative Committee and Supervisory Board, as well as to the relevant Holding function. The

Disclosure Report as of September 30, 2022

evolution of the IRRBB RAF KPIs during Q3/2022 at standalone and consolidated level is presented in the table below:

RAF		2022					
Interest Rate Risk in the Banking Book KPIs	RO Consolidated	Target	Trigger	Limit	31-Jul	31-Aug	30-Sep
	NII Sensitivity (% of budget)	> -11.5%	-11.5%	-15.0%	-5.02%	-4.51%	-4.27%
	EV Sensitivity (% tier 1 capital)	> -14.0%	-14.0%	-15.0%	-4.10%	-5.45%	-4.18%
	UCB Standalone	Target	Trigger	Limit			
	NII Sensitivity (% of budget)	> -11.5%	-11.5%	-15.0%	-5.97%	-5.15%	-4.86%
	EV Sensitivity (% of tier 1 capital)	> -14.0%	-14.0%	-15.0%	-4.45%	-4.73%	-4.48%

Starting with 30-Jun-21 an "add-on" was considered for economic value sensitivity in order to stress the stable part of the non maturing deposits considered insensitive to interest rates and included in the behavioral model.

UCB	Worst case scenario of SOT		T1 Own Funds	%	Limit	Trigger
31-Jul-22	-43,907,301	short rates up	987,030,830	-4.45%	-15.00%	-14.00%

B) Granular indicators – measured on a daily basis

B.1) BPO1 sensitivity for the Banking book positions per maturity buckets

This measures the changes in economic value due to a parallel shock of +/-1 bp of the interest rate term structure. The result is monitored daily by Financial Risk and reported to the Management and to the relevant Committees.

B.2) VaR for IRRBB

This indicator is monitored daily by Financial Risk and reported to the Management and to the relevant Committees.

As of 30.09.2022 the value of the granular indicators versus limits is as per tables below:

BPO1 Bank Book UCB	(EUR)	0-3M	3M-1Y	1Y-3Y	3Y-10Y	10Y+	SUM
	Total ccys	7,576	19,219	22,528	161,429	4,963	122,295

8. EXCESSIVE LEVERAGE RISK

Description of Excessive Leverage Risk

Risk of excessive leverage represents the risk resulting from the Bank's vulnerability due to leverage or contingent leverage that may require unintended corrective measures to its business plan, including distressed selling of assets which might result in losses or in valuation adjustments to its remaining assets.

The monitoring of risk of excessive leverage is realized based on specific instructions received from the Group and by taking into account the legal provisions in force.

Thus, the Leverage Ratio indicator, calculated according to instructions received from Group is included in the Risk Appetite Framework of the Bank. A system of limits comprising a Target level, a Trigger and a limit is applied. Monitoring is done on a quarterly basis.

LrSum: Comparison between carrying amounts of assets and exposures for Leverage Effect calculation

The template LrSum presents the reconciliation between the total exposure considered for the computation of the Leverage report and the carrying amounts of the assets.

Summary comparison of accounting assets vs leverage ratio exposure measure		Q3 2022	Q2 2022
1	Total assets as per published financial statements	62,499,378,747	60,181,487,471
2	Adjustment for entities which are consolidated for accounting purposes but are outside the scope of prudential consolidation	-	-
3	(Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference)	-	-
4	(Adjustment for temporary exemption of exposures to central banks (if applicable))	-	-
5	(Adjustment for fiduciary assets recognised on the balance sheet pursuant to the applicable accounting framework but excluded from the total exposure measure in accordance with point (i) of Article 429a(1) CRR)	-	-
6	Adjustment for regular-way purchases and sales of financial assets subject to trade date accounting	-	-
7	Adjustment for eligible cash pooling transactions	7,105,356	9,770,895
8	Adjustment for derivative financial instruments	248,888,489	198,105,890
9	Adjustment for securities financing transactions (SFTs)	-	-
10	Adjustment for off-balance sheet items (ie conversion to credit equivalent amounts of off-balance sheet exposures)	6,665,553,455	6,462,095,580
11	(Adjustment for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital)	(18,154,897)	-
EU-11a	(Adjustment for exposures excluded from the total exposure measure in accordance with point (c) of Article 429a(1) CRR)	-	-
EU-11b	(Adjustment for exposures excluded from the total exposure measure in accordance with point (j) of Article 429a(1) CRR)	-	-
12	Other adjustments	(230,446,972)	(412,479,283)
13	Total exposure measure	69,172,324,178	66,438,980,552

LrCom: Leverage Ratio Common Disclosure

The template presents Leverage Ratio as at 30 September 2022 and the split of the main exposures according with CRR Art. 429 and 451.

Disclosure Report as of September 30, 2022

		CRR leverage ratio exposures	
		2022 Q3	2022 Q2
On-balance sheet exposures (excluding derivatives and SFTs)

Basel III stipulates the computation, the reporting and the disclosure of the Leverage Ratio and presents a requirement based on risks.

CRR Art. 429 defines the Leverage Ratio as the result of dividing the capital measurement indicator into the institution 's total exposure measurement indicator. The indicator is expressed as a percentage between Tier 1 Own Funds and the total exposure calculated as the sum of the exposure value of all the assets and off-balance sheet items that have not been deducted from the Tier 1 Own Funds calculation.

9. LIQUIDITY RISK

9.1 Liquidity

The liquidity risk is defined as the risk that the Bank may not be able to fulfill its expected or unexpected financial obligations, without affecting its daily operations or its financial condition.

Among the main potential generators of liquidity risk, UniCredit Bank distinguishes between:

- Liquidity Mismatch Risk/Refinancing Risk: the risk of a mismatch between either the amounts and/or the timing of cash inflows and outflows;
- Liquidity Contingency Risk: the risk that future events may require a materially larger amount of liquidity than the bank currently requires. This might be due to the loss of liabilities, requirements to fund new assets, difficulty in selling liquid assets or difficulty obtaining needed new liabilities in the case of a liquidity crisis.
- Market liquidity risk: the risk that the institution cannot easily unwind or offset specific exposures, such as investments held as liquidity reserves, without incurring a loss because of inadequate market depth or market disruptions;

The Bank's **liquidity and funding strategy** is centered on the following strategic principles and goals set in coherence with the risk appetite:

Strategic Principles:

- Liquidity and funding management is based on clear and strict risk management principles set according to the Risk Appetite Framework (RAF).
- The definition of the desired liquidity profile is fully integrated within the Risk Appetite Framework, in order to drive the evolution of the lending activity consistently with the desired funding profile.
- The self-sufficiency funding strategy is based on a well-diversified funding base due to its commercial banking model, with priority given on the growth of local funding sources out of customer business with a variety of products (sight, savings, term deposits), as well as capital market transactions (e.g. medium- and long-term placements of own issues).
- The strict principle of self-sufficient funding ensures that the proceeds are used primarily for business development, enabling UCB and the Group to calculate funding costs according to own risk profile.
- All strategic goals must be in compliance with UniCredit Group Strategy and Regulatory requirements.

Strategic Goals:

- Optimization of the liquidity profile in line with liquidity limits in place and local regulatory framework, maximizing cost savings without sacrificing funding diversification;
- Self-sufficiency target fulfillment by achieving a sound commercial funding base and creating a foundation for full compliance with the relevant Risk Appetite Framework metrics;
- Achievement of main KPIs for each year in accordance with the Risk Appetite Framework, designed as quantitative targets defined in the yearly Funding Plan for, among others, the Liquidity Coverage Ratio and the Funding Gap;
- Achievement of the necessary resilience towards stress scenario through building sufficient stock of the Counter Balancing Capacity;

- Exploring the advantage of cheaper sources like Covered Bond or Supranational Funding and evaluating the relevant maturities of medium/long term issuances;
- Keeping the funding dependency on short term wholesale external funding to a reasonable level necessary for reciprocity;
- Efficient management of the trading/investment book financing (mitigating the use of intragroup funding) in compliance with intragroup rules for bond investments, as well as market risk and credit risk limits.

The main objective of the Funding Strategy is defined with the purpose of covering possible structural funding needs, whilst ensuring compliance on going concern and according to a forward looking perspective with limits and triggers of liquidity and balance sheet metrics, both regulatory and internal as defined in the Bank's liquidity risk framework/ Risk Appetite framework.

Key Principles:

Liquidity management is performed by UniCredit Bank in accordance with local binding laws and regulations and UniCredit Group Liquidity Management Framework. Clear and strict risk management principles are set according to the Bank's Risk Appetite Framework.

The main goal of UniCredit Bank's overall liquidity management is to keep the liquidity exposure at such a level that the Bank is able to honor its payment obligations on an on-going basis, but also during a crisis without jeopardizing its franchise value or its brand's name.

Roles and Responsibilities

A clear separation of duties and responsibilities is implemented in UniCredit Bank for an efficient and effective management of liquidity risk. Accordingly, the Bank keeps two governance layers:

- Managing Bodies acting as strategic decision-taking functions (as the Board of Directors, Supervisory Board, Assets and Liabilities Committee)
- Operational units acting as operative liquidity management functions, each being assigned different roles and responsibilities: Finance/ALM, Markets, Financial Risk.

In particular, Finance (ALM) provides strategic planning, management and supervision of the Bank's overall liquidity position, whilst Markets ensures operational short-term liquidity management (up to 1 year). Financial Risk has the responsibilities of independent controls and reporting of liquidity risk.

Risk Measurement and Reporting

Techniques for risk measurement

Liquidity risk, for its particular nature, is addressed by means of gap analyses, liquidity stress testing, and complementary measures (mainly through a set of indicators: e.g. loan to deposit ratio, liquidity coverage ratio). These tools allow the measurement of liquidity risk over different time horizons and by currencies.

Liquidity Framework

UniCredit Bank's liquidity framework encompasses: short term liquidity risk management (operational liquidity, up to 1Y) and structural liquidity risk management (liquidity position over 1y).

- **Intraday liquidity management**

The focus of intraday liquidity management is on actively managing the Bank's intraday liquidity obligations by timely meeting payments and keeping a sustainable intraday liquidity buffer.

- **Short-term liquidity risk management (operational liquidity):**

Short term liquidity management and reporting focuses on the Bank's liquidity profile from 1 day up to one year.

The aim of short term liquidity management is to maintain a sustainable equilibrium between cash inflows and cash outflows for the purpose of ensuring the normal operational continuity of the UniCredit bank's commercial business. The main activities for attaining such purpose are:

- managing the access to the payment systems and of the cash payments (operational liquidity management)
- monitoring the level of the liquidity reserves and the extent of their utilization over time, with the objective of maintaining the liquidity reserves at appropriate levels in order to meet potential outflows.

As indicator of the short term liquidity risk, apart from the Liquidity Coverage Ratio, UniCredit Bank adopted the Operative Maturity Ladder (OML) by currency, whose main components are the net contractual cash flows (in/outflows) affecting the cash position of Bank, thus impacting directly the "core liquidity" of the bank over pre-defined time buckets, and the Counterbalancing capacity.

- **Medium and long-term liquidity risk management (structural risk):**

Structural liquidity management (over 1 year) aims at ensuring the financial stability of the balance sheet, with the objective of avoiding excessive and unexpected pressures on the funding requirements over the short term, whilst optimizing the funding sources and related costs. This is achieved through the maintenance of an adequate balance between the medium- long term and sticky assets and the respective stable sources of funding.

The main metric used to measure medium-long term liquidity risk is the Net Stable Funding Ratio, along with managerial structural liquidity ratios/gaps.

Liquidity Stress Testing

Stress testing is a risk management technique used to evaluate the potential effects on an institution's financial condition of a specific event and/or movement in a set of financial variables.

UniCredit Bank performs regular liquidity stress tests in order to diagnose the Bank's liquidity risk. The main scenarios of potential liquidity crisis identified are:

- Name Crisis - defined as a factual or market-hypothesized problem specific to the Bank, expected to cause a substantial reduction in counterparty limits by rating-sensitive costumers and inter-bank markets and possible withdrawal of Sight and Saving Deposits
- Market Downturn - defined as a generally negative development in the market's environment (e.g. broad sector, market or economic events) causing an increased stretch on available liquidity
- Combined - highlights the interconnections that stem from the happening of both economic turmoil and Bank's specific issues
- In particular, the results of the stress tests are useful for:
 - assessing the adequacy of liquidity limits
 - assessing the right size of the counterbalancing capacity/liquidity buffer to withstand a given scenario within a defined timeframe
 - providing support to the development of the contingency plan.

Monitoring and Reporting

UniCredit Bank measures and manages liquidity based on a monitoring system that envisages different types of restrictions – managerial and regulatory – embedded in risk metrics limits or warning/trigger levels.

In case of limit breach or warning level activation, Financial Risk function investigates the rationale of the events, triggering the proper escalation and reporting them to the relevant committees.

Regulatory reports refer to LCR (liquidity coverage ratio), NSFR (net stable funding ratio) and ALMM (additional liquidity monitoring metrics). In addition are the reports required by the national regulations.

The high quality liquid assets reserve consists of coins and banknotes, withdrawable reserves held at the National Bank and securities issued by the Romanian government and local public authorities. In addition, the high quality assets also include securities received as collateral in reverse repo transactions.

Liquidity outflows are influenced mostly by the evolution of non-operational deposits of corporate and sovereign customers, which is also the main source of funding for the bank.

Liquidity inflows are composed mainly of maturing deposits held at financial institutions and of instalments from clients' loans.

During the first three quarters of 2022, the significant currencies for LCR reporting were RON and EUR. From a currency mismatch point of view, during the first three quarters of 2022 there were some significant amounts in EUR reverse repo transactions, while the main funding sources are made up of deposits denominated mostly in the national currency from the retail and corporate customers, as well as deposits and credit facilities in EUR received from group entities and supranational institutions. The mentioned reverse repo transactions had short maturities, under 30 days, and were collateralised by high quality level 1 government bonds and interbank deposits

The following table presents, on a consolidated level, the LCR average in RON equiv. for the first three quarters of 2022. The number of observations for determining the average is 12, with figures coming from monthly reports from September 2022 and the previous months.

Disclosure Report as of September 30, 2022

In the first three quarters of 2022, the LCR level was comfortably above regulatory requirements (100%), as well as exceeding the internally targeted level by the Bank which is above the regulated level. Furthermore, UniCredit Bank calculates on daily basis the LCR and monitors very tightly the evolution of the indicator on a weekly basis.

Regarding the evolution of liquid assets, there was a greater volatility of the reserves held at the National Bank compared to the previous year, during the Minimum Requirement Reserve maintenance period. The bank recorded an increase in the portfolio of government issued securities with a very high liquidity quality level, and a slight increase in coins and banknotes, especially towards the end of the year. The bank started in H1 2020 to create a HTC bonds portfolio.

During September 2021 – September 2022, UniCredit Bank maintained an adequate level of the NSFR, with an average at consolidated level for the last 4 quarters over 157.77%.

UniCredit Bank aimed to improve the liquidity coverage ratio by increasing the residual maturity of funding resources and through obtaining funding with low outflow rates. For achieving this goal, the bank considers in current business strategy a priority to gather retail deposits.

The evolution of the NSFR indicator during the last 12 quarters at consolidated level is presented in the table below:

Date	Total ASF	Total RSF	Ratio	Exchange Rate
31-Dec-19	36,093,851,569	22,630,827,937	159.49%	4.7793
31-Mar-20	36,129,829,067	22,485,120,639	160.68%	4.8254
30-Jun-20	35,658,673,433	20,576,147,125	173.30%	4.8423
30-Sep-20	36,255,277,123	21,151,131,613	171.41%	4.8698
30-Dec-20	37,248,331,575	21,202,491,856	175.68%	4.8694
31-Mar-21	36,370,162,982	21,988,845,371	165.40%	4.9251

34	Net Stable Funding Ratio (%)				157.19%

The items requiring stable funding consisted of investments in securities, loans and credit lines, while stable funding was provided by items such as capital instruments, retail and corporate deposits, intragroup financing and facilities from supranational entities.

Risk Mitigation

The main liquidity mitigation factors for UniCredit Bank are:

- planning and monitoring of the short-term and medium to long-term liquidity needs;
- an effective Contingency Liquidity Policy (CLP), including a Contingency Action Plan to be executed in case of market crisis;
- a liquidity buffer to face unexpected outflows;
- liquidity stress testing performed on a regular basis;
- a system of early warning indicators to anticipate increased risk or vulnerabilities in the liquidity position or potential funding needs.

Funding Plan

The Funding Plan plays a fundamental role in overall liquidity management, influencing both the short term and long term liquidity position. It includes the set of the medium long term instruments (with relevant amount, maturity, timing, cost) to be realized in order to cover the expected funding deriving from the planned evolution of the liquidity uses and, avoiding pressure on the short term and ensuring compliance with regulatory and managerial limits.

The Funding Plan is updated at least on a yearly basis and is aligned with the Financial Planning (Budgeting) process and the Risk Appetite Framework.

Contingency Liquidity Management

Contingency Liquidity Management has the objective of ensuring the availability of an effective organizational model in order to manage effectively the negative effects of a liquidity crisis situation, which is achieved through:

- setup of an extraordinary liquidity crisis governance model, linked to a set of early warning indicators, that can be activated in case of a crisis
- pre-definition of a set of available standby mitigating liquidity actions in order to be able to proceed timely
- consistent internal and external communication crisis.

A relevant part of the contingency liquidity management is the **Contingency Funding Plan**, which describes potential, but concrete actions the Bank can take in order to obtain additional funding in contingency situations and is complementary to the yearly Funding Plan. The measures foreseen are described in terms of a menu of actions together with sizes, instruments, and timing of execution aimed at improving the Bank's liquidity position during times of name or systemic crisis.

Early warning indicators

In order to identify emerging vulnerabilities in its liquidity risk position or potential funding needs, UniCredit Bank employs a set of early warning indicators linked to macroeconomic or market indicators and specific internal metrics. A specific activation mechanism is adopted in order to have sufficient time to inform senior management of a deteriorating situation and allow putting in place adequate actions aimed at restoring the business-as-usual state.

Concentration of funding and liquidity sources

At the end of Q3 2022 the customer deposits were ~90% of the total debt (on standalone level). Of the total resources from non-banking customers, 40% were deposits from retail customers, 50% from corporate customers, the difference being deposits from PB customers and other financial customers excluding banks. It is important to be underlined that the share of retail customers continuously increased in total resources from non-banking customers due to the measures taken by the bank to decrease its resources dependency on wholesale customers. With regards to counterparties, the main fund providers of the bank are other entities from UniCredit Group, sovereign and non-financial corporate customers and supranational.

9.2 Liquidity Buffer and Funding strategy

Liquidity Buffer

In order to avoid that short-term liquidity crunch or other unexpected events that might lead to potentially serious consequences, the Bank constantly maintains a liquidity reserve. This is a cushion represented by an ample amount of cash and other highly liquid assets to be promptly converted in cash (either through sale or collateralized funding) in case of ordinary or unexpected needs of liquidity, in accordance with regulatory and internal liquidity rules.

Stress testing (regulatory or internal stress scenarios) ensures that there is adequate liquidity both during normal economic cycles, as well as periods of sustained stress and that appropriate excess liquidity buffer is in place.

The major category in the Bank's liquidity buffer is represented by high quality bonds issued by the Government of Romania, eligible at Central Bank.

Liquidity and Funding strategy

UniCredit Bank reviews annually its liquidity and funding strategy by considering the desired business model, the actual and expected macroeconomic/financial conditions and the funding capacity of the Bank, as well as the overall risk tolerance as reflected by the Risk Appetite Framework. The strategy is implemented in all management stages of liquidity and financing, from financial planning and monitoring to implementation and execution of the process.

The strategic principle of "self-sufficiency" governs the liquidity and funding strategy of the Bank, which targets to achieve a well-diversified funding base, with priority given on the growth of local funding sources out of customer business with a variety of products (sight, savings, term deposits), as well as medium- and long-term placements of own issues.

In accordance with this principle, the main strategic goals the liquidity and funding strategy encompasses are:

- optimization of the liquidity profile in line with liquidity limits in place and local regulatory framework;
- self-sufficiency target fulfillment by achieving a sound commercial funding base and creating a foundation for full compliance with the relevant Risk Appetite Framework metrics;
- achievement of main KPIs for each year in accordance with the Risk Appetite Framework, designed as quantitative targets defined in the yearly Funding Plan for, among others, the Liquidity Coverage Ratio and the Core Banking Book Funding Gap;
- achievement of the necessary resilience towards stress scenario through building sufficient stock of the Counter Balancing Capacity, as targeted in the yearly Funding Plan;
- exploring the advantage of cheaper sources like Covered Bond or Supranational Funding and evaluating the relevant maturities of medium/long term issuances;
- keeping the funding dependency on short term wholesale external funding to a reasonable level necessary for reciprocity.

The main tool through which the Bank implements its liquidity and funding strategy is the Funding Plan. Finance is responsible for the execution of the Funding Plan, accessing the markets for medium and long term funding, in order to increase Bank's self-sufficiency, exploit market opportunities and optimize the cost of funds.

10. COVID-19 OUTBREAK CONTEXT, HIGH ENERGY AND FOOD INFLATION

10.1 COVID- 19 - Overview of the measures taken by ECB, EBA and NBR

During 2020 and in the first half of 2021, the Board of Directors of the European Central Bank (ECB) has decided a number of measures to ensure that its directly supervised banks can continue to fulfil their role in funding the real economy given the economic effects of the Covid-19.

As well, the European Banking Authority (EBA) issued several statements to explain a number of interpretative aspects on the functioning of the prudential framework in relation to the classification of loans in default, the identification of forborne exposures, and their accounting treatment. These clarifications help ensure consistency and comparability in risk metrics across the whole EU banking sector, which are crucial to monitor the effects of the current crisis.

These measures are detailed in all transparency report (Pillar 3 report) disclosed during 2020 and in transparency report (Pillar 3 report) disclosed during Q1 2021. All transparency reports are published on the Bank's website in the Financial Reports section.

During 2020, the National Bank of Romania (NBR) adopted a package of measures aimed at mitigating the negative effects of the crisis generated by the coronavirus (Covid-19) pandemic on households and Romanian companies.

In 2021 the NBR additionally took the following measures:

- After cut the monetary policy rate by one percentage point (pp) in total during 2020 year, the NBR completed the relaxation cycle in January 2021 by a last cut with 0.25 pp to 1.25%;
- As result of decrease of uncertainties regarding economic and financial developments, the NBR Board of Directors announced in March that it approved the calendar of meetings on monetary policy issues for 2021, after it was suspended during the previous year, and monetary policy meetings were held whenever necessary.

The historically low interest rates in 2020 and in 2021 represented a rather exceptional situation triggered by the unprecedented measures taken by the government to encourage the economic growth in the tough conditions caused by Covid-19.

On the backdrop of the rising inflation starting 4Q 2021 (annual inflation 8.2% in Dec-2021) and especially in the first half of 2022, mainly driven by higher prices for energy and food, BNR started the monetary policy tightening on October 6, 2021, gradually increasing the key rate from the record low 1.25% reached on January 18, 2021 to 6.75% on November 8, 2022 (up by 5.5 percentage points in about one year) aiming to fight the exceptionally high inflation (above 15.0% starting June 2022). Taking into consideration the slight easing of the headline inflation at 15.3% in October, NBR reduced the hiking pace at its last meeting in November to 50bp, taking the key rate from 6.25% to 6.75%. We expect inflation to exceed 16% in November and to remain close to that level in the coming months, with the peak between 16% and 18%. While gas, electricity and food prices will further rise, we also see domestic demand weakening abruptly and lowering core inflation. With price caps in place until August 2023, we expect inflation to fall into single digits in June 2023 and decline to 8.6% at end-2023. The policy rate could be taken to 7% in January and end the hiking cycle, NBR aligning its policy rate with the Central Banks in the Czech Republic and Poland. Additional hikes in 2023 would be warranted if domestic demand remains resilient. However, falling real wages and tighter financial conditions are likely to weigh on consumer demand, keeping core inflation (excluding food and energy prices) below regional levels. We see limited scope for cuts next year, potentially to 6% after the headline inflation falls into single digits.

The current macroeconomic context leads to higher than expected rates increase which positively impacted the bank revenues, while the high inflation increased their expenses. In the medium-term the credit quality and the loan demand are under pressure.

However, through the measures taken by NBR starting 2018 (Regulation 6/2018 modifying Regulation 17/2012) there have been introduced restrictions for consumer lending aiming to encourage responsible lending policies and avoid an excessive indebtedness level, protecting the clients against the FX and interest rate risks.

10.2 MACROECONOMIC context and the measures taken by the Romanian State

The high inflation this year was driven mainly by the higher energy and commodity prices following the Russia's invasion in Ukraine on February 24, 2022 but also by the transition to a greener energy production. Higher prices for oil, gas and agricultural commodities spilled over to inflation in CEE countries - Romania being among the most affected due to a higher weight of food prices in the consumer basket (~33%).

In addition to the pressures on the international energy market, the liberalization in July 2021 of the electricity prices for households on the local market lead to the surge in the energy prices in Romania starting H2 2021. Only in Q4 2021, the domestic wholesale prices for natural gas and electricity rose by more than seven times, the Romanian authorities being in the position to introduce support measures, similar to other EU countries.

A price cap scheme on the natural gas and the electricity prices was introduced as of November 1st, 2021. The scheme was initially valid until 31 March 2022, then it was prolonged until 31 March 2023, through EGO 27/2022.

The scheme consists of state subsidies paid to the energy distributors for the difference between the market prices and a capped energy price paid by the final consumers, households and companies. The subsidies will be paid by the state, from the budget of the Labour Ministry for households and of the Ministry of Energy for companies. Also, through the EGO 27/2022 the government imposed a 80% tax on the additional income obtained by the energy producers following the higher prices for electric energy and natural gas.

Moreover, as the prices of gasoline and diesel fuels increased from 6.3-6.5 lei/liter at the beginning of 2022 to almost 9 lei/liter in June, triggering protests and social discontent within some segments of the population, the government introduced a mechanism to compensate the price of fuel resulting in a discount of 0.5 lei/liter at the final consumer, applied for at least 3 months starting July 1st then prolonged by the end of 2022. The compensation is paid half by the government and half by the energy companies voluntarily conforming to this mechanism.

Taking into consideration the high prices for energy and for the basic food products, the increase of the interest rates for loans and the high economic and political uncertainty, the government made available starting May-June several measures under the Support for Romania's program in amount of RON 17.3bn (EUR 3.5bn, 1.5% of GDP). The sources of financing are the EU funds (RON 9bn) and the state budget (RON 8.3bn). The measures are aimed at supporting the population, farmers, food industry and agriculture sector as well as the SMEs in Romania. The package of measures is mainly aimed at the low income population, but also aims at attracting large investments and offers support to the business environment through state aid schemes. The package includes two large categories of measures:

1. Support for the business environment: SMEs, large investors, companies in transport and distribution as well as the ongoing public investments

- May 1st: a dedicated scheme of EUR 300 million targeting about 4,000 of carriers and distributors affected by the high prices for fuels, granted as a subsidy of RON 0.50/liter of fuel

- May 1st: EUR 5.2 billion in 2022 (50% from EU funds and 50% from the state budget) for the finalization of the ongoing public investments
- EUR 200 million allocated for a 10% premium of the value of the food processed locally
- EUR 300 million grants for working capital allocated to the Romanian farmers
- EUR 100 million for the set-up of the state-owned Trade House Unirea
- The gross minimum wage in agriculture and food processing to increase to RON 3,000
- May 1st: measures for jobs protection: RON 450 million (from the EU program SHURE) allocated by the end of 2022 for the payment of 75% of the gross wage for the employees in technical unemployment or with a reduced worktime through the Kurzarbeit program
- June 1st: EUR 300 million allocated for grants of up to EUR 400,000 for each SME proving they were impacted by the conflict in Ukraine and its costs for utilities rose by over 15%
- June 1st: EUR 200 million state aid for the large investments, of over EUR 1 million, in the regional development, with a major impact in the economy.

2. Social protection for about 4.7 million of vulnerable people

- June 1st: EUR 1bn (50% from EU funds) allocated for food vouchers of EUR 50 at each 2 months for vulnerable people (families with at least 2 children/a single parent, with an income below RON 600/month, retired persons with an income below RON 1,500/month)
- June 1st: EUR 33m allocated for vouchers to be received by the pupils with social scholarships: EUR 30 per each month (except vacations) for food, stationery and clothes
- Minimum wage can be voluntarily raised by RON 200 the amount being tax exempted
- Meal ticket value for employees to be increased by 50% to RON 30
- RON 270m allocated for doubling the meal ticket in hospitals and nursing homes at RON 22/day (3 million of people to benefit of this measure)
- RON 86m allocated for children protection in the state care system (47,000 of children to benefit)
- RON 500m available for young people: a) to start a family and encourage birth-rate: Family start program (80% state guarantee for loans of max. RON 75,000 or to cover the expenses with the nursery school/ school/ after school/ rent/ pre-payment for a housing loan); b) Student Invest program (80% state guarantee for loans of max. RON 50,000 for study tuitions, books publishing, accommodation in a student residence)

In the context of increasing macroeconomic imbalances, reflected by the large twin deficits, accelerating inflation and constraints imposed by Excessive Deficit Procedure and PNRR, the Government margin for tax reduction is very limited, not been excluded tax hikes starting January 1st, 2023.

Government measures as per GEO 37/2020 regarding the postponement of loan repayments

On 30 March 2020 the Government adopted the Emergency Ordinance 37/2020 requiring banks to provide payment moratorium for a maximum 9 months' period to all customers impacted by Covid-19, upon request from customers, but not later than 31 December 2020. Its provisions were prolonged 31 March 2021 through the EGO 227/2020. In order to access this facility, debtors had to declare on their own responsibility that they have registered a decrease in income or cash collected by at least 25% in the last 3 months prior to requesting the suspension of payment obligations by reference to the similar period of 2019/2020. Under the payment

moratorium applied during Covid-19 period, the ECB and NBR allowed banks to not allocate additional provisions over the payment suspension period.

A similar measure has been introduced through the EGO 90/2022 starting July 1st, 2022 allowing banks to postpone up to 9 months the payment obligations of the customers in financial distress caused by the current energy and food crisis. It is applicable to the consumer and the mortgage loans granted before April 30, 2022. In order to access this facility, debtors had to declare on their own responsibility that they have registered an increase of their average expenses by at least 25%, in the last 3 months prior to requesting the suspension of payment obligations by reference to the similar period of 2021. In case of this moratorium the banks have to allocate additional provisions over the payment suspension period.

The tables below summarize the information on loans and advances which were subject to legislative and non-legislative moratoria as of 30 September 2022:

Disclosure Report as of September 30, 2022

IMM Invest Romania program

IMM Invest program in force by June 30, 2022 was made available to the Romanian entrepreneurs in 2020, aiming to offset the Covid-19 restrictions impact in the economy and provided a significant financial support to the local businesses and the local financing banks. The total ceiling of guarantees that can be granted this year was of 10 billion lei, of which 10 billion lei is allocated for the AGRO IMM INVEST program.

Through the IMM Invest Romania program, the SMEs affected by COVID-19 outbreak have covered their liquidity needs for current operations or investment needs by accessing financing solutions (both working capital or investment loans) from the banks under FNGC IMM guarantee scheme (on behalf of Ministry of Public Finance).

Having in view the success of the program during pandemic, the government decided to continue the state aid scheme with the new IMM Invest Plus which became operational for banks at the beginning of October 2022. The program has more sub-components: IMM INVEST ROMÂNIA, AGRO IMM INVEST, IMM PROD (for productive SMEs and startups in the urban area), GARANT CONSTRUCT, INNOVATION and RURAL INVEST and it is aimed at providing SMEs with non-reimbursable funds, state guarantees for loans (working capital/ investments) and state subsidy for the interest rate in the first year of the loan. The allocated funds are mainly targeting the digital and the green transition, improving the energetic efficiency as well as the urban and rural development.

EU Recovery and Resolution Fund (PNRR)

This year, a huge opportunity for further development of the SMEs segment is the EU Recovery and Resolution Fund (PNRR). The EU resources could finance the large-scale green transition, the structural transformation and the development of the economy, Romania benefiting from one of the most generous allocations relative to GDP. Romania is the only country in the CEE to have requested all the available grants (EUR 14.2bn) and loans (EUR 14.9bn) from the RRF. Thus, it should receive approx. € 2 billion in grants and at least € 1 billion in loans every six months, the equivalent of 2% of GDP each year. In January 2022, Romania received EUR 3.8bn (1.6% of GDP) in RRF pre-funding (13% of the loans and grants it applied for) and to date the government sent requests for over EUR 2bn to be reimbursed by the European Union and received EUR 2.6bn in October 2022.

10.3 Financial impact of Covid-19 outbreak on the financial & prudential position of the Group

After a year 2021 with difficult market conditions in the context of the pandemic, in first three quarters of 2022 the lending accelerated, both in the Companies segment and in the Individuals segment, through newly financed volumes higher than the similar period of last year. Operating income was over the first half of 2021, supported by commission income and net interest income due to the increase in trade volumes. In the first six months of 2022, the cost of credit risk improved due to the quality of the loan portfolio, significant recoveries and the resumption of payments from customers who benefited from their suspension in the context of the pandemic, and the non-performing loans rate decreased gradually.

Regarding **UCLC**, the newly financed volumes signed are 1.3% above the previous year, while interest income was higher than the previous year, as were other types of operating income, contributing to a higher Gross Operating Profit than the previous year and the budgetary estimates.

Also in case of **UCFIN** there was an acceleration of the lending activity of natural persons for personal needs, simultaneously with a significant improvement of the quality of the portfolio as well as of the activity of collecting outstanding debts.

The Group has a limited estimate of the impact of Covid-19 on its future financial position due to significant uncertainties, but has analyzed several scenarios and considers that the assessment of the business continuity principle is appropriate and there is no risk in this regard over the next 12 months.

Liquidity & solvency position

During the first three quarters of 2022 the Group continues regularly to assesses the impact of the Covid-19 outbreak in its business, risk profile, prudential and performance indicators. In this sense, the Group evaluates its performance based on stress testing scenarios on key performance and prudence indicators, strict monitoring of position and liquidity indicators (mainly liquidity coverage rate - “LCR” and liquidity quick ratio), monitoring the evolution of government interest rates due to the high level of market volatility and its impact on the capital base and monitoring the simulations of solvency indicators. The Group stress test results are comfortable; both in terms of solvency and in terms of liquidity UniCredit Romania Group expects to maintain a sound position as compared to regulatory minimum ratios.

Liquidity indicators, calculated according to Regulation 575/2013, are comfortably above the minimum regulatory requirements, as depicted in the tables below, and the Group estimates that it will remain above 100% also for the future:

Ratio	30 September 2021	31 December 2021	31 March 2022	30 June 2022	30 September 2022
LCR (average)	166.43%	163.34%	162.06%	159.92%	153.31%
NSFR	159.55%	159.38%	159.43%	155.07%	157.19%

Solvency

During 2022 the Group continued to take measures for capital preservation due to the unanticipated Covid-19 outbreak such as:

- Strict monitoring of capital position and isolation of potential elements with high volatility;
- Periodic simulations at consolidated level by using stress testing methodologies regarding the increase of the exchange rate, the increase of the interest rate and the increase of the non-repayment probabilities.
